

Vision for the Building Department

1. For the staff to understand **“No”** is not in the Building Code.
2. Lower our score in the CRS program by address concerns with the NFIP. (FEMA program that determinants insurance rates in flood prone areas)
3. Fill open positions with Inspectors that have the same philosophy as I do. (customer friendly and assist them with guidance on their projects)
4. Enhance the plan review process by reducing time jobs are in the queue and having an open dialog with designers and contractors.
5. Look at the permitting process and work towards an easier experience in the building department.
6. Add additional permit types to online permitting process and start accept plans online for electronic plan review.
7. Address the process of “we’ve always done it that way” by talking out the issues and coming to a process that is consistent with state statutes and not personal preference.
8. Work with staff for further licensing, by having additional licensing this will help out in the Insurance Service Office (ISO) rating for the Building Code Effectiveness Grading Schedule (BCEGS).
9. Have an open dialog with the community and contractors by meet with local contractors for an open house to introduce our new staff and the philosophy of the Building Department.
